

Technical Health Check

Optimise your ROI through an independent, cost effective Health Check of your Oracle environments.

70% of Teamsolve Health Checks uncover critical environments that are not properly backed up to meet business requirements.

Equally, Over 70% of Teamsolve's customers had an urgent need to take action as a result of our Health Check reports.

Can you be sure you're in the 30%?

Business Focus

Evaluating your entire technical infrastructure through a Teamsolve Oracle Healthcheck is a proven way of ensuring you:

- Maximise operational performance
- Enhance resilience
- Improve security
- Conform to best practise

If you have a particular system problem or simply want to gain improved visibility of your Oracle infrastructure and the best way forward – a Teamsolve Health Check will prove invaluable.

Teamsolve Staff

With extensive Oracle experience and the highest Oracle accreditation and qualifications across Technology, Middleware and Applications, our consultants have experienced almost every combination of environment possible.

Our consultants will first spend time on site to appraise the environment, interview relevant staff to define exactly what is required from the infrastructure and then produce a comprehensive, independent and detailed technical recommendation report.

Typically, a Health Check involves 2 days onsite and 3 days to produce a comprehensive report complete with prioritised recommendations; from the most urgent to the "nice-to-have".

In a very recent Health Check, we came up with over 50 recommendations and the output was highly regarded by the customer.

A Health Check includes a detailed review and report on the following:

Business Aspect

- Does the database meet the business requirements?
- Service Level Agreements
- Review of Disaster & Recovery procedures
- Up to date resilience
- Performance issues
- Recommendations

Server

- Specification of the server
- Configuration
- DR & resilience
- Performance
- Bottlenecks
- Recommendations

Database

- Versions
- Licenses
- Configuration
- Memory/SGA utilization
- Database internals performance
- Performance
- Bottlenecks
- Backup & Recovery
- Disaster Recovery procedures
- Resilience
- Security
- Recommendations
