

Oracle Business Intelligence (BI) Standard Edition One

Teamsolve's approach to implementing Oracle Business Intelligence SE1 suite is to remove risk by delivering a scalable solution that fits your business needs not just now – but as your business continues to evolve.

Oracle Business Intelligence Standard Edition One is a complete, integrated and attractively priced BI solution in a box, for 5 to 50 users in the small to medium sized business, or a department in a larger organisation.

It provides everything you need to create highly formatted reports, operational dashboards with ad-hoc analysis, and to consolidate your data for a complete view of your business. It includes the same technology as Oracle Business Intelligence Enterprise Edition, making it simple to scale as your business needs grow.

Oracle Business Intelligence Standard Edition One

Think Big – Start Small

The most successful Business Intelligence projects take an evolutionary approach – so that your users recognise the benefits and become accustomed to the power and capability of your BI solution. Teamsolve work with you to develop a Roadmap approach – aligning your BI system to your business needs to produce a prioritised strategy outlining the way forward. What's more, Oracle Business Intelligence SE One uses the same technology components as Oracle Business Intelligence Enterprise Edition, so you can effortlessly upgrade to Enterprise Edition licenses when you need to expand – with no need to convert or re-develop reports, dashboards, or data models.

Key Components

Oracle Business Intelligence Standard Edition One is a complete, integrated business intelligence system comprising of;

Oracle Database Standard Edition One – The worlds leading database is included, serving as the foundation for storing all of your integrated data in a data warehouse.

Oracle Warehouse Builder – allows you to model, deploy and maintain a coherent picture of data operations from multiple source systems such as relational, multidimensional or flat filed.

Oracle Business Intelligence Server – provides a rich calculation engine that can integrate multiple, disparate data sources into a single federated view - with support for Oracle and non-Oracle sources - including Microsoft SQL Server, Microsoft Office Excel, most ODBC sources, multi-dimensional sources, XML, flat files and more.

Oracle Business Intelligence Interactive Dashboards – provide a web browser interface to instantaneously view important metrics, reports, and visualisations. This enables you to drill and navigate amongst transactional data – perfect for management reporting.

Oracle Business Intelligence Answers – a 100% thin client, ad-hoc query and analysis solution that is fully integrated with Interactive Dashboards and BI Publisher. You can quickly and easily create queries, drill, analyse, visualise and embed the results in dashboards or deliver to a variety of formats via BI Publisher.

Oracle Business Intelligence Publisher – a single solution to create, manage and deliver all of your business documents and reports such as sales orders, invoices, purchase orders, shipping labels, management reports, and even government forms. BI Publisher can generate and deliver these documents to multiple destinations including printer, email, fax, and directly over the internet in formats like PDF, HTML, Microsoft Office Excel, EFT and more.

Oracle Business Intelligence Standard Edition One

Teamsolve's BI Express Pack

Teamsolve's BI Express Pack is an out of the box implementation of Oracle Business Intelligence SE One which is configured to deliver a set of introductory reports and dashboards in-line with your immediate business requirements.

Teamsolve's BI Express Pack comprises of:

- A Business Information Model incorporating physical, business and presentation layers, drill paths, aggregations, calculations and business definitions based on up to 2 databases and up to 5 physical files
- Up to 2 Interactive dashboards – on a modern web architecture
- Up to 10 reports delivered using Oracle BI Answer
- Up to 5 Oracle Publisher Reports using Oracle BI Publisher to produce 'pixel-perfect' reports
- 1 day training for the Administrator
- 1 day training for end-users on creating new reports and working with the dashboard

Our Approach to Your Business

Our approach is to think big and start small, prioritising implementation steps with your business needs so that you start to see business benefits from day one.

Listen	We hold an initial discovery meeting to discuss your needs. We then conduct an on-site scoping exercise with key business users to fully capture and analyse your requirements.
Plan	Our Roadmap approach unites business needs with technical delivery milestones to ensure an evolutionary approach to your BI project. This way you fulfil your most urgent requirements using best practice methodologies, whilst never losing sight of the business benefits at each stage.
Document	Your project is documented throughout so that your business has auditable, best practice guidelines to follow.
Empower	Once your initial scope is fulfilled, we aim to make sure that your Business Intelligence solution continues to deliver maximum value. By training your Administrator and end-users we can empower them to create and customise new dashboards and reports, evolving your system as your business changes to continue to deliver maximum business insight.

Key Benefits

- Positioned in Gartner's Leaders Quadrant for Business Intelligence
- Fixed scope, low risk, high value solution
- Fully configured in-line with your business priorities
- Quick implementation
- Roadmap to grow and enhance functionality
- Full write-up and documentation
- Fixed cost
- Increased interactivity

Affordably Priced

Prices start at £26,930 for 10 users including software licenses and increase based upon each additional user, for example;

20 users = £34,360 50 users = £56,650
